Screen-Print Ink Compatibility with Fome-Cor®, JetMount® and Foam-X® Recovery

Foam Boards with white clay coated liners manufactured by Alcan Composites USA, are often screen printed when used in the signage and display industry. These boards include Fome-Cor®, Jetmount® and Foam-X® Recovery. Although it would be impossible for any one to run a trial using all of the different types of inks available, Alcan Composites USA Inc. has coordinated testing with these ink suppliers using several different inks on these foam board materials.

Certain inks vary in their properties and performance in various applications. Alcan Composites USA, Inc. recommends that you consult with the ink manufacturer if there are any questions regarding the use of a particular ink and to test any application prior to initiating a production run.
